

Ideation Phase

Define the Problem Statements

Date	07 October 2026
Team ID	SWTID-2026-1916
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand the customer's point of view. The problem statement focuses on the challenges faced by users while working with ServiceNow Incident forms and helps define a practical solution using Client Scripts and UI Policies.

Problem Statement (PS)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a ServiceNow incident user / support team member	to create and update Incident records with complete and correct information	important fields may not automatically respond to the selected values	the Incident form needs dynamic field control and validation	concerned about incomplete or incorrect incident information
PS-2	a ServiceNow administrator	to ensure Incident forms follow the required business rules	users can submit or edit records without the expected validation	manual checking increases errors and reduces consistency	the form configuration may not provide a reliable user experience

Selected Problem Statement: ServiceNow Incident users need dynamic validation and field control so that required information is entered correctly and form behavior changes automatically according to the configured conditions.

Project Solution Direction: Implement Client Scripts and UI Policies on the Incident table to provide client-side validation, dynamic field behavior, and improved data accuracy.
