

Ideation Phase

Empathize & Discover

Date	07 October 2026
Team ID	SWTID-2026-1916
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It helps the team understand the users of the ServiceNow Incident form, their goals, challenges, expectations, and frustrations while using the system.

Project User Perspective

THINK & FEEL • Wants incident forms to be simple and accurate • Wants immediate feedback • Wants required information to be clear • Feels concerned about incomplete data			SEE • Incident form fields • Impact, urgency and assignment group • Dynamic field behavior • Validation messages
HEAR • Instructions from administrators • Team rules for incident data • Feedback about incorrect records • Guidance on required fields	USER ServiceNow Incident User	SAY & DO • Creates and updates incidents • Changes field values • Submits records • Expects the form to respond automatically	
PAIN • Incomplete incident information • Manual checking • Incorrect field values • Confusing form behavior		GAIN • Accurate incident records • Automatic validation • Clear mandatory fields • Faster and easier form completion	

Empathy Insight: Incident users need a form that guides them toward complete and correct information without requiring repeated manual checks. Client Scripts and UI Policies address this need through dynamic behavior and validation.

Example: ServiceNow Incident - User Empathy Map

Needs clear instructions	Wants fields to react automatically	Doesn't want incomplete records	Needs quick validation	Wants correct assignment	Expects easy incident submission
Fields should be easy to understand Don't forget required information It should be simple THINK & FEEL What really matters? Accuracy • speed • clarity USER Incident user Clear field status Immediate feedback Correct values are enforced					
Updates incident details		Tests different field values	Checks validation before save	Wants fewer errors	Completes incident efficiently
Pain • Incomplete data • Manual validation • Incorrect values			Gain • Accurate records • Automatic validation • User-friendly forms
