

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	07 October 2026
Team ID	SWTID-2026-1916
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

This brainstorming exercise identifies practical ideas for improving Incident form behavior in ServiceNow using Client Scripts and UI Policies. The ideas focus on validation, dynamic field behavior, usability, and reliable configuration. The strongest ideas are prioritized based on usefulness and feasibility.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

PROJECT FOCUS Implement Client Script & UI Policy on the ServiceNow Incident table. Goal: make incident forms more dynamic, accurate, and user-friendly.	PROBLEM STATEMENT Incident forms may allow incomplete or inconsistent information when field behavior is not controlled dynamically. The project addresses this using UI Policies and Client Scripts.	KEY RULES • Validate important inputs • Make fields mandatory when needed • React to field changes • Validate before saving • Support list-cell editing • Test every configuration
---	--	--

Selected Problem Statement: How can ServiceNow Incident forms be configured to automatically enforce correct data entry and provide immediate feedback to users?

Step-2: Brainstorm, Idea Listing and Grouping

UI Policy Make Assignment group mandatory when Impact is High.	UI Policy Action Control Urgency-related field behavior according to the required project condition.	onChange Show an immediate message or update behavior when a field value changes.	onSubmit Validate required information before an Incident is saved.
onCellEdit Validate or control values when an Incident list cell is edited.	Testing Test all configurations with positive and negative cases.	Usability Use clear messages and automatic field behavior to reduce user errors.	Documentation Capture configuration and output screenshots for project evidence.

Step-3: Idea Prioritization

Idea	Importance	Feasibility	Priority
UI Policy – High Impact / Assignment group mandatory	High	High	1
onSubmit – Save validation	High	High	2
onChange – Immediate response	High	High	3
Testing the complete configuration	High	High	4
onCellEdit – List editing validation	Medium	Medium	5
Documentation and screenshots	Medium	High	6

Final Prioritized Idea: Implement the required UI Policy and Client Scripts on the Incident table, then test each configuration to ensure correct field behavior and save validation.
